

GENERAL INTRODUCTION

Third party accredited product conformity certification schemes not only provide a means of identifying materials and designs of systems, products or structures which have demonstrated that they have the requisite performance in fire, but additionally provide confidence that the systems, materials, products or structures actually supplied are provided to the same specification or design as that tested/assessed.

Third party accreditation of installers of systems, materials, products or structures provides a means of ensuring that installations have been conducted by knowledgeable contractors to appropriate standards, thereby increasing the reliability of the anticipated performance in fire.

Building Control Bodies may accept the certification of products, components, materials or structures under such schemes as evidence of compliance with the relevant standard. Similarly, Building Control Bodies may accept the certification of the installation or maintenance of products, components, materials or structures under such schemes as evidence of compliance with the relevant standard. Nonetheless, a Building Control Body will wish to establish, in advance of the work, that any such scheme is adequate for the purposes of the Building Regulations.

Many certification bodies which approve such schemes are accredited by UKAS.

Sector and when you click on that heading all the available schemes will be shown with a link to the Scheme Provider and an email address for enquiries.

When you click on the link you will go to the website of the provider where you will find details of their scheme and a list of accredited companies. Manufacturers who are members of these schemes will provide Product Certification and you can be assured that the product they currently supply is made to exactly the same specification or formulation as the product originally tested. Similarly installer members will use only suitably Certificated products and will provide a Certificate of Conformity when their work is completed that can be accepted by the Building Control Body as proof that the required level of protection has been provided.

The Certificates of Conformity (C of C) should be used in new construction to show what has been provided when completing the documentation required by Building Regulation 38 and as detailed in Appendix G of ADB. Similarly the C of C should be provided to the Risk Assessor after any work in existing buildings to show that fire precautions such as the Fire Separating Elements that make up the compartmentation have not been compromised by the work on the structure of the building.

All the schemes in this register are provided by scheme operators that are UKAS accredited

THIRD PARTY CERTIFICATION

The extract on the left is from paragraph 0.15 of Approved Document B (ADB) of the Building Regulations and refers to Third Party Certification of Products and Installers of Fire Protection in buildings. Similar wording is used in all the guidance documents issued by the DCLG for Risk Assessment as required by the Regulatory Reform (Fire Safety) Order and the PFPF has issued guidance on what to look for in schemes. [A guide to product & installer certification](#)

There are 4 major providers of TPC for PFP products and installers in the UK and the schemes cover all aspects of passive fire protection products and services. The individual certification schemes for all sectors are shown in the register.

To find a scheme for the sector in which you are interested simply use the index to find the General Product

REGISTER OF THIRD PARTY CERTIFICATION SCHEMES FOR PFF						
The following members offer UKAS accredited Third Party Certification Schemes						
Risk Assessment						
Life safety risk assessments under the appropriate legislation for NI, SCOT, ENG & WALES	Fire Risk Assessment			FRACS Warrington Cert Ltd	www.warringtoncertification.com/fracs.html	WCL@warringtonfire.net
General Product Sector						
	Sector sub group	Manufacture Yes/No	Installation Yes/No	Certification Body and/or Scheme Name	Link	Email
